

Row Cover

Agfabric's row cover is the professional protection and covering fabric providing an easy and eco-friendly way to protect your plants from frost, insect and other weather damages.

Use Agfabric's row cover during all your growing seasons:

- **Extend Growing Season** - Plant your crops 1-2 weeks earlier than usual and the growing season in the fall can be equally extended. Row cover traps heat and moisture to speed up germination and root growth
- **Frost Protection** - Protect your plants in cold weather. Lay off light weight floating row cover or use hoops to support the heavier fabric, making spacing for plants which could be damaged by the frost directly
- **Pest and Animal Protection** - A floating row cover placed over seedlings before they emerge prevents pests from reaching tender seedlings and protect your plants from animals' damage during the growing and harvest season.
- **Moisture Retention** - Water condenses under the row cover then returns to the soil. Protection from the wind also aids the plant in retaining moisture. Keep your plants grow health and strong in harsh weather elements

 **Light Transmission, Breathable, Reusable for years**
